

FUEL SYSTEM

BOOSTER FUEL PUMP

Part #82020

To avoid running your performance engine lean, you need to "amp" up your fuel system. The best upgrade to use is the ZEX™ Booster Fuel Pump Kit. It is installed in-line, so there is no need for the mess of dropping your fuel tank. Unlike other manufacturers who just sell you a pump, the ZEX™ Booster Fuel Pump Kit includes all the hoses, hose clamps, wiring, etc. you need for an easy and clean install. The kit provides the potential to boost your fuel system flow capacity up to 650 hp, even on high fuel pressure turbo, supercharged, and nitrous applications. So "amp" up and ensure that you always have the fuel you need to beat your competition.

SOFTWARE

Searching for the best combination of engine parts to build the ultimate Sport Compact car and don't have unlimited funds to try every new part on the market? The new Sport-Compact DynoSim™ engine simulation, from ProRacing Sim™ Software, is the tool you need to find the best component-setup for your street or serious race engine. Test cams, variable valve timing, compression ratios, induction systems, superchargers, turbos, nitrous, exhaust systems, and much more on your PC before you buy parts! The Sport-Compact DynoSim™ is simple and fun to use. Just click on any part or specification listed on the high-tech component interface. The parts you select will be installed, and dyno-test results will be shown on custom graphs, instantly! Display wheel horsepower, flywheel horsepower, torque, engine pressures, VE, induction airflow, and more! Build multiple engine combinations and setup quick comparisons to find the best power, torque, or even maximum area under the power or torque curves!
