

EFI TRUCK NITROUS SYSTEM

55-125 HP

NEW

Part #82047

ZEX™ introduces the first nitrous system specially engineered for the performance and safety needs of hot rod, off-road and late model truck owners. When designing their new truck nitrous system, ZEX™ engineers looked at truck configurations, which feature larger engine bays and different cab locations than cars. Taking into consideration the unique needs of truck performance enthusiasts, ZEX™ designers created the safest, cleanest and easiest to install nitrous system you can buy.

The ZEX™ Truck Nitrous System comes complete with everything you need and requires only two hours to install; a simple plug and play procedure for 4, 6, or 8 cylinder EFI engines. The ideal nitrous system for any fuel injected truck, the ZEX™ Truck Nitrous System features Active Fuel Control™ technology, which monitors nitrous bottle pressure and then adjusts fuel enrichment for the perfect mixture. ZEX™ systems activate electronically at wide-open throttle, using your engine's TPS sensor - it's almost like traction control for your truck - achieving perfect nitrous engagement, especially on newer throttle by wire trucks.

- A complete kit that's designed for perfect fitment on pick-up style trucks
- Easy, plug and play, two-hour installation
- Designed to work equally well on 4, 6, or 8 cylinder EFI engines
- Active Fuel Control™ technology monitors nitrous bottle pressure and adjusts fuel enrichment for perfect mixture
- ZEX™ systems activate electronically at wide-open throttle using your engine's TPS sensor

RACE EFI NITROUS SYSTEM

Part #82037

Patented nozzle technology provides better atomization for maximum horsepower!

The Race EFI Nitrous System incorporates several nitrous technology breakthroughs, making it the perfect choice for serious race applications. One such patent-worthy advancement is ZEX™'s Fuel Shear™ technology, which injects the enrichment fuel directly into the center of the nitrous plume, yielding total and even fuel atomization. As with every ZEX™ nitrous system, the new Race EFI System includes the tuning and safety feature that has revolutionized the nitrous industry - Active Fuel Control™. Fuel enrichment is automatically adjusted in accordance with bottle pressure, so tune-ups stay dead-on despite bottle pressure fluctuation. In addition, the Race EFI Nitrous System also utilizes a patented electronic TPS switch for perfect system activation at wide-open throttle. Tunable from 100 to 250 horsepower, the new ZEX™ Race EFI Nitrous System is compatible with any fuel injected engine.

- Tunable from 100-250 additional engine horsepower
- Fuel Shear™ technology injects enrichment fuel directly into the nitrous plume for better atomization
- Active Fuel Control™ adjusts fuel enrichment in accordance with bottle pressure
- Features a patented electronic TPS switch for perfect system activation at wide open throttle

Not legal for sale or use in California on pollution controlled vehicles
